# ABSTRACT OF THE DISCLOSURE

5 A hands-free device is adapted for use with a  
cellular telephone in a car to permit hands-free  
operation of the cellular telephone, and includes a  
main terminal, a secondary terminal, and a microphone  
provided on one of the main and secondary terminals.  
The main terminal includes a first casing, a power  
supplying unit, a voltage regulating circuit, a first  
connector, an audio output amplifier circuit, and a  
10 sound output unit. The secondary terminal includes a  
second casing, a second connector connected removably  
to the first connector, a third connector connected  
removably to the cellular telephone, a hands-free  
control circuit, a voltage output control circuit, and  
15 a gain control circuit. The secondary terminal can be  
replaced so that the hands-free device can be used with  
any type of cellular telephone without changing the  
main terminal.
